

NURSING MANAGEMENT PROGRAM

Background

The changes of the health system all over the world require updated approaches in order to cope with current and future challenges.

The advanced nursing management course will enable nurses to expand their professional expertise and to build the capabilities and competencies required for leading the nursing teams, team building for care planning, evaluation of care, health-education and follow-up of care.

Trainees will acquire the competencies required to undertake leadership positions in clinical departments or services and to provide specialized care requiring clinical decision-making and critical thinking.

Main Objectives

To enhance the knowledge and skills of senior nurses in the nursing administration of clinical departments or other clinical institutions.

To prepare future nurse managers for leadership positions in hospital departments
